

*"The best virtual Windows and Microsoft 365 experience, delivered to you on Microsoft Azure."*

## Solution Overview

**Making the shift, and moving your employees to a modern desktop will help your business foster a highly secure workspace, empowered by the latest productivity, teamwork and collaboration experiences for your organization.**

This is best achieved through Alliance Business Technologies' Microsoft AVD Solution; bringing together Office 365 with Windows 10 Enterprise, and Enterprise Mobility + Security, in a complete intelligent solution.

### Delivers the only multi-session Windows 10 experience

Provide employees with the best virtualised experience with the only solution fully optimised for Windows 10 and Office 365.

### Reduce cost using existing licenses

Use existing licenses to drive cost efficiency with a modern cloud-based virtual desktop infrastructure (VDI) and pay only for what you use.

### Built-in intelligent security

Keep your apps and data secure and compliant with security capabilities that can proactively detect threats and take remedial action.

Microsoft Partner

## Key Focus Areas

### Device & App Readiness

Upgrade Readiness to help identify devices, OS versions, apps, add-ins, drivers and more to assess those against compatibility information to help target your initial deployments.

### Directory & Networking Readiness

Implement Azure Active Directory, as well as get your network ready for moving system images, application packages and user files across your network to support later deployment and migration activities.

### Office & Line of Business App Delivery

The process of collecting app packages, packaging applications, making necessary changes to intranet or web-based apps to support modern browsers and determining how apps will be delivered to users' devices.

### Security & Compliance

Windows 10 virtualization-based security can prevent credential theft, protect against browser-based exploits and malicious code execution by isolating core processes and secrets from the operating system.

### OS Deployment & Feature Updates

Deployment rings are used to validate updates and upgrades before broad deployment - PC Refresh, PC Replacement, or New PC.

### User Communication & Training

Critical to driving usage of new capabilities for enhancing teamwork, communications and productivity.

### Windows & Office as a Service

To help ensure all of your devices are being kept up to date with the latest updates, using Update Compliance capabilities in Windows Analytics.
